

Overview

We have developed the fully automated SAP configuration documentation together with our valued key customers. This tool generates fully automated, based on either an specific SAP system or even based on a number of SAP systems as defined in your SAP Solution Manager Business Process Project, documentation of the configuration in various formats (HTML, XML, Text) and stores individual files on a directory structure based on either IMG Implementation Guide structure or, if applicable, in a directory structure based on your SAP Solution Manager Business Processes, including Scenarios, Processes and Process Steps.

This makes this solution fit perfectly into our overall approach of enhancing application lifecycle management with SAP Solution Re-Engineering, Solution Documentation and Solution Monitoring of operations and compliance.

In a typical CRM system, the documentation run will identify and about 3,000 configuration items and respectively generate the same number of documentation files for approximately 6,500,000 configuration records. This solution runs in your development system typically for about 1-3 hours for a full documentation creation, depending on your system and number of IMG entries. Of course these can be filtered e.g. by items recently transported.

This picture shows an overview of the functionality and integration :

Structure based on Solution Manager Project

Below please find the automated generated structure, based on a Solution Manager Business Process project, in this case partial ECC and partial CRM based. Start the tool in Solution Manager and it will connect to all respectively required systems and retrieve and document the configuration data :

The screenshot shows a project structure in SAP Solution Manager. On the left, a tree view shows the hierarchy: ZFE Test Project > Business Scenarios > Customer > Business Processes > Processing Purchase Orders in ERP. On the right, a list of generated HTML files is shown with their respective sizes:

- Compare quotations
- Create or process purchase orders
- Find new source of supply
- Monitor the output of messages
- Release purchasing documents
- Create Purchasing Groups.htm (1 KB)
- Define Attributes of System Messages.htm (18 KB)
- Define Default Values for Buyers.htm (3 KB)
- Define Purchasing Value Keys.htm (2 KB)
- Define Reasons for Cancellation.htm (1 KB)
- Define Reasons for Ordering.htm (1 KB)
- Define Screen Layout at Document Level.htm (15 KB)
- Define Tolerance Limit for Archiving.htm (2 KB)
- Entry Aids for Items Without a Material Master.htm (1 KB)
- Set material block for goods movements.htm (1 KB)

Generated file content

Here you find an example configuration documentation file, automatically generated for IMG entry “Define Catalogs” :

Define Catalogs

About us

We are delivering SAP consulting services since 1989 and have a wide range of experience across our European, USA, Middle East and Asian customers.

The vast majority of our projects are fixed-price based – guaranteeing that way, that our customers always will receive the services at the investment they plan within a schedule agreed.

Besides SAP Solution Manager, we are focused on SAP GRC, SAP cProjects and RPM and BusinessObjects implementations.
